June 7, 2018

The Honorable Steve King, Chairman  
The Honorable Steve Cohen, Ranking Member  
U.S. House of Representatives Judiciary Committee  
Subcommittee on the Constitution and Civil Justice  
2141 Rayburn House Office Building  
Washington, DC 20515

Dear Chairman King and Ranking Member Cohen:

We write to you regarding the hearing on “Questions Regarding the U.S. Census.” EPIC is a public interest research center established in 1994 to focus public attention on emerging privacy and civil liberties issues. The Census implicates numerous privacy issues. As the Subcommittee evaluates the 2020 Census, we ask you to consider the risks of Census data being used for illegitimate purposes.

The Census is an essential part of understanding the changing demographics in America. The census helps ensure evidence-based policy decisions and census data is the source of much political and economic planning in the United States. However, it is of the utmost importance the individual privacy is respected. Every effort must be taken to ensure that the personal information of individuals and that census data is not used improperly.

There has been greater concern about the confidentiality of 2020 census data than in previous decennial censuses. The Census Bureau conducted a study in 2017 that found respondents expressing new concerns including the “Muslim ban,” the dissolution of DACA, and Immigration and Customs Enforcement. The study found that these concerns were most pronounced among immigrant respondents.

Secretary Ross’s decision to add a citizenship question to the 2020 census raises concerns about improper uses of Census data. The U.S. has misused Census data to target minority groups before. During World War II, the Census Bureau provided information to the War Department that led to the internment of 120,000 innocent Japanese. After 9-11, EPIC pursued a Freedom of

4 Id. at 1.
Information Act request about the potential misuse of census data. Documents from the 2000 Census obtained by EPIC revealed that the Census Bureau had provided the Department of Homeland Security with data on individuals of Arab ancestry. As we explained in 2004:

EPIC obtained documents through the Freedom of Information Act last week revealing that the Census Bureau gave the Department of Homeland Security statistical information on people who identified themselves on the 2000 census as being of Arab ancestry. The special tabulations were prepared specifically for the law enforcement agency, and do not indicate that similar information about any other ethnic groups was requested. The tabulations apparently include information about United States citizens as well as individuals of Arab descent whose families have lived in the United States for generations.

One tabulation shows cities with populations of 10,000 or more and with 1,000 or more people who indicated they are of Arab ancestry. For each city, the tabulation provides total population, population of Arab ancestry, and percent of the total population which is of Arab ancestry.

A second tabulation, more than a thousand pages in length, shows the number of census responses indicating Arab ancestry in zip codes throughout the country. The responses indicating Arab ancestry are subdivided into Egyptian, Iraqi, Jordanian, Lebanese, Moroccan, Palestinian, Syrian, Arab/Arabic, and Other Arab.

The heavily redacted documents show that in April 2004, a Census Bureau analyst e-mailed a Department of Homeland Security official and said, "You got a file of Arab ancestry information by ZIP Code Tabulation Area from me last December (2003). My superiors are now asking questions about the usage of that data, given the sensitivity of different data requests we have received about the Arab population."

EPIC’s FOIA efforts led the Census Bureau to implement new procedures regarding the release of “potentially sensitive data to requesting law enforcement agencies and organizations or individuals.” EPIC supported those efforts but recognizes also the ongoing concerns about the potential misuse of data collected by government agencies. Amid rising fears that some minority groups may be targeted by law enforcement agencies, your committee should ensure that the data collected by the federal government is not misused.

EPIC looks forward to working with the Subcommittee to ensure that the census data provides the maximum benefit to the American public while minimizing the privacy risks.

We ask that this letter from EPIC be entered in the hearing record.

Sincerely,

/s/ Marc Rotenberg
